

It is time for this band to become segmented in some form like the other bands we have. A "gentlemen's agreement" to operate certain modes only on certain frequencies will not hold up any longer. The legal segmenting of this band is needed to prevent continuing conflicts of modes. With the width of this band, 200 KHz, I don't see why the legal implementation of 43 KHz for CW would be a burden on the other modes.
